Abstracts

3D Forward-Looking Sonars are advanced underwater imaging systems that provide real-time, three-dimensional visualizations of the underwater environment ahead of a vessel or submersible. By emitting sonar waves and analyzing their reflections, these systems create detailed, three-dimensional maps of submerged obstacles, terrain, and structures, allowing operators to navigate safely in complex or unknown environments. Widely used in industries like marine navigation, underwater exploration, and defense, 3D forward-looking sonars enhance situational awareness, improve collision avoidance, and assist in search and rescue operations, especially in low-visibility or murky waters.

The global 3D Forward Looking Sonars market size was estimated at USD 60.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
