Report Overview

Glasses-free 3D is any method of displaying stereoscopic images (adding binocular perception of 3D depth) without the use of special headgear or glasses on the part of the viewer. Because headgear is not required, it is also called 'glassesless 3D ' or ' autostereoscopy '. There are two broad approaches currently used to accommodate motion parallax and wider viewing angles: eye-tracking, and multiple views so that the display does not need to sense where the viewers' eyes are located.

The global 3D Glasses-free Display market size was estimated at USD 16 million in 2023 and is projected to reach USD 21.06 million by 2032, exhibiting a CAGR of 3.10% during the forecast period.

North America 3D Glasses-free Display market size was estimated at USD 4.39 million in 2023, at a CAGR of 2.66% during the forecast period of 2024 through 2032.
