## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 3D Intraoral Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global 3D intraoral camera production reached approximately 0.43 million units, with an average global market price of around US\$ 2,900 per unit. The gross profit margin of major companies in the industry is between 42% ? 62%. In 2024, the global production capacity of 3D intraoral cameras was approximately 0.56 million units. A 3D intraoral camera is a digital dental imaging device that captures high-resolution three-dimensional images of teeth, gums, and oral structures. It enables accurate visualization, real-time diagnostics, and digital impression workflows, supporting restorative dentistry, orthodontics, and implant planning. The industrial chain includes upstream suppliers of CMOS image sensors, optical lenses, illumination modules, microprocessors, and housing materials. The midstream consists of medical device manufacturers integrating imaging hardware, software algorithms, calibration, and sterilizable design. Downstream applications include dental clinics, hospitals, orthodontic centers, dental laboratories, and digital dentistry service providers. The 3D intraoral camera market is growing rapidly as digital dentistry becomes standard practice worldwide. Dental professionals increasingly rely on 3D imaging for accurate diagnosis, treatment planning, and patient communication. The integration of 3D cameras with CAD/CAM systems, chairside milling, and digital workflows enhances clinical efficiency and reduces treatment time. Advances in sensor resolution, scanning speed, and AI-assisted image processing further improve diagnostic value. Demand is also driven by the expansion of orthodontic and implant procedures in aging populations. As dental clinics continue to digitize operations, 3D intraoral cameras are expected to maintain strong double-digit growth momentum.

The global 3D Intraoral Camera market size was estimated at USD 1260.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
