Abstracts

A 3D Laser Line Sensor is a device used to capture three-dimensional measurements of an object's surface by projecting a laser line onto the surface and then using a camera or detector to capture the deformation of the laser line. This deformation, caused by the contours and shape of the object, is used to generate a 3D point cloud or map of the surface. The sensor is commonly used in industrial applications for quality control, inspection, and automation, allowing for precise measurements of complex shapes, dimensions, and surface defects. It is highly accurate and fast, making it ideal for applications like robotic guidance, reverse engineering, and 3D scanning.

The global 3D Laser Line Sensor market size was estimated at USD 1635.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
