## Abstracts

3D medical image processing software is a computer program specifically designed for processing and analyzing medical image data (such as CT, MRI, ultrasound, etc.) to generate three-dimensional models or visualizations. It is commonly used in clinical diagnosis, surgical planning, and other applications. By acquiring two-dimensional tomographic images through various medical imaging devices (CT, MRI, etc.), the software performs image segmentation and three-dimensional reconstruction to form visualizable models. Based on these models, data analysis can be conducted or the models can be exported for functions such as 3D printing.

The global 3D Medical Image Processing Software market size was estimated at USD 2633.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
