Report Overview:

3D tracking technology digitizes, formats and visualizes measurement data to provide the detailed view needed. The positional motion of optical navigation markers or EM sensors can be tracked in the X, Y, and Z axes of a 3D coordinate system. Rotations on these axes (roll, pitch, and yaw) are calculated as orientation data. Motion in all directions is known from any angle/viewpoint. The motion is reported relative to a fixed object or frame of reference; the "home" position. Multiple objects and their respective relative positions can be dynamically tracked simultaneously.

The Global 3D Position Tracking Device Market Size was estimated at USD 621.29 million in 2023 and is projected to reach USD 1076.86 million by 2029, exhibiting a CAGR of 9.60% during the forecast period.
