Abstracts

3D printed acetabular cup is an advanced implant widely used in the field of orthopedics, especially in hip replacement surgery in recent years. 3D printed acetabular cup uses advanced rapid prototyping technology, namely 3D printing technology, to extract accurate three-dimensional data of the acetabulum based on the patient's imaging data such as CT or MRI. Then, using this data, medical metal materials such as titanium alloy are stacked layer by layer through 3D printing equipment to form an acetabular cup that perfectly matches the patient's acetabulum. This manufacturing method not only achieves personalized customization, but also greatly improves the accuracy and adaptability of the acetabular cup.

The global 3D-Printed Acetabular Cup market size was estimated at USD 175.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
