Abstracts

3D printing metal nickel refers to the additive manufacturing process that utilizes nickel-based alloys, such as Inconel (e.g., Inconel 625 or 718), Hastelloy, or pure nickel, to fabricate complex, high-performance components layer by layer through techniques like selective laser melting (SLM), electron beam melting (EBM), or binder jetting. These methods enable the production of parts with exceptional mechanical strength, corrosion resistance, and thermal stability, making them suitable for demanding applications in aerospace, energy, and chemical processing industries where traditional manufacturing falls short in achieving intricate geometries or material properties.

The global 3D Printing Metal Nickel market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
