Report Overview:

Metal 3D printer, also called metal additive manufacturing, can produce metallic products through three - dimensional and printing technology. Now it is widely used in automotive industry, aerospace industry and medical industry. Metal 3D printer works by laying down metal powder. A high powered laser then melts that powder in certain precise locations based on a CAD file. Once one layer is melted, the printer will place another layer of metal powder on top, and the process repeats until an entire object is fabricated.

The Global 3D Printing of Metals Market Size was estimated at USD 1380.22 million in 2023 and is projected to reach USD 2695.25 million by 2029, exhibiting a CAGR of 11.80% during the forecast period.
