Abstracts

3D printing plant-based meat refers to the utilization of additive manufacturing technologies to fabricate meat analogs from plant-derived ingredients, where specialized food-grade printers deposit layers of protein-rich formulations?often derived from sources such as soy, peas, or mycoprotein?to replicate the texture, structure, and appearance of conventional animal meat. This process enables precise control over fat distribution, marbling, and fiber alignment, allowing for customization of nutritional profiles and sensory attributes that closely mimic specific cuts of meat, thereby offering a scalable and innovative approach to producing sustainable alternative protein products.
