Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 3D Printing Polyetheretherketone Filament competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 3D Printing Polyetheretherketone Filament is a high-performance thermoplastic filament with polyetheretherketone (PEEK) as the matrix material. It is made by melt extrusion process and is specially designed for 3D printing technologies such as fused deposition modeling (FDM) or fused filament fabrication (FFF). It has the characteristics of high temperature resistance (long-term temperature resistance up to 260°C, short-term temperature resistance up to 300°C), chemical corrosion resistance, excellent biocompatibility, high mechanical strength and X-ray transparency. The strength and rigidity can be improved by adding reinforcing materials such as carbon fiber. It is widely used in aerospace, medical implants (such as artificial joints, bone defect repair parts), automotive industry (such as lightweight parts) and electronic and electrical fields. Medical-grade products need to be produced in clean workshops and meet the quality management standards of medical materials. Industrial-grade products are used as metal substitutes to manufacture high-demand lightweight parts.

The global 3D Printing Polyetheretherketone Filament market size was estimated at USD 472.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
