Abstracts

3D Robotic Vision Solution refers to an integrated system that enables industrial robots to perceive and interpret the three-dimensional shape, position, and orientation of objects in their environment. Using 3D imaging sensors and cameras, these systems allow robots to make real-time decisions for complex tasks such as object detection, picking, positioning, quality inspection, and navigation. Unlike 2D vision systems that analyze flat images, 3D robotic vision provides depth perception and spatial understanding, enabling more advanced automation in unstructured or dynamic environments.

The global 3D Robotic Vision Solution market size was estimated at USD 998.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
