Abstracts

3D scanning to CAD service refers to capturing the surface geometry data of physical objects through 3D scanning technology (such as laser scanning, structured light or photogrammetry), generating high-precision point cloud or mesh models, and then processing data, extracting features and parametric reconstruction through reverse engineering software (such as Geomagic Design X, SolidWorks or CATIA), and finally converting them into editable CAD models (such as STEP, IGES or native formats). This service realizes the digital reverse modeling of physical samples, which is suitable for product imitation, dimensional inspection, design optimization and rapid prototyping development, ensuring the consistency of digital models with physical objects in terms of geometric tolerances (such as ISO 2768 standards) and functional features.
