The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 3D Structured Light Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 3D Structured Light Camera is a 3D vision sensor that projects a specifically coded optical pattern onto an object's surface and analyzes the pattern's deformation to calculate depth information in real time. Its core principle is based on triangulation. The camera captures distorted light spots or stripes modulated by the object's surface and uses an algorithm to generate high-precision 3D point cloud data. This system features non-contact measurement, high resolution, and millimeter-level accuracy. It is widely used in industrial inspection, 3D scanning, robotic navigation, biometrics, and human-computer interaction, and is particularly suited for the efficient reconstruction of complex contours and dynamic scenes. In 2024, the global sales volume of 3D Structured Light Camera will reach 115k units, with an average selling price of approximately US\$3,800 per unit.

The global 3D Structured Light Camera market size was estimated at USD 445.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.20% during the forecast period.
