## Abstracts

The 3D structured light module is a sensor module used to capture the three-dimensional information of an object. By projecting a specific light pattern (such as stripes, dots, etc.) onto the surface of the object and then capturing the reflected light pattern through the camera, the 3D structured light module can achieve high-precision three-dimensional reconstruction and recognition. This technology is widely used in face recognition, object scanning, industrial inspection and other fields.

The global 3D Structured Light Modules market size was estimated at USD 303.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
