Abstracts

The 3D ultrasonic fingerprint solution is a biometric recognition technology based on the penetrating and reflective properties of ultrasound. A sensor transmits ultrasound waves to the finger, leveraging the density difference between the skin and air on the fingerprint surface to capture the fingerprint's three-dimensional structure (including microscopic details such as ridges and sweat pores). This creates a high-precision 3D image and compares it with the fingerprint information stored on the device for accurate recognition. Its core advantage lies in overcoming the two-dimensional limitations of traditional optical fingerprints, providing a safer and more reliable recognition experience. With the advancement of high-end mobile phone OLED screen technology, such as circularly polarized light, LTPO, and Poly-less technology, under-screen optical fingerprint recognition faces challenges. The reduced light transmittance of these new screens significantly reduces the under-screen optical fingerprint recognition experience, especially with circularly polarized light and Poly-less screens, where technical conflicts prevent proper operation. In today's high-end mobile phone market, ultrasonic fingerprint recognition is the inevitable choice for a more secure and smooth unlocking experience. Compared to optical fingerprint recognition, ultrasonic fingerprint recognition offers greater security, can recognize wet and oily hands, and offers significant advantages in module technical specifications. 3D ultrasonic fingerprint recognition is a future trend in mobile devices. With the continuous promotion of new screen technologies, ultrasonic fingerprint recognition will inevitably become increasingly popular, replacing under-screen optical fingerprint recognition as a standard feature in mid-to-high-end models.

The global 3D Ultrasonic Fingerprint Solution market size was estimated at USD 1866.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.50% during the forecast period.
