Abstracts

A 3D virtual dissection table is an advanced anatomical visualization system that enables interactive, multi-layered exploration of human and animal anatomy through high-resolution three-dimensional models, typically operated via touchscreen or gesture-based interfaces. These tables provide detailed, scalable representations of anatomical structures?from entire organ systems down to cellular levels?while incorporating features such as real-time dissection simulations, cross-sectional imaging, annotation tools, and integration with medical imaging data like CT or MRI scans. By offering a non-destructive, repeatable, and hygienic alternative to traditional cadaver-based dissection, these systems serve as powerful educational, clinical, and research tools for medical schools, hospitals, and biomedical institutions, enhancing spatial understanding, supporting surgical planning, and facilitating collaborative learning in anatomy and pathology.

The global 3D Virtual Dissection Table market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
