## Abstracts

3D human anatomy software is an unprecedented 3D interactive learning software for human system anatomy. It is usually rich in content and has many high-definition models. Users can rotate and zoom in and out 360° to learn about various structures of the human body in detail. A specific human body part can be selected through a menu, which is a very important tool in the medical research process. The market growth of 3D human anatomy software is primarily driven by the digital transformation of medical education, technological advancements, and the growing global emphasis on improving the quality of medical talent training. Traditional anatomy teaching methods are plagued by issues such as limited resources, non-replicable operations, and ethical controversies. In contrast, 3D anatomy software can provide learners with a more intuitive, vivid, and repeatable learning experience through high-definition, three-dimensional visual effects and multi-angle interactive operations. This flexible and efficient learning method is widely welcomed by medical schools, nursing colleges, and vocational training institutions. Meanwhile, with the rise of online education platforms and the growing demand for remote teaching, the role of 3D anatomy software as a core teaching tool has become increasingly solid. 3D human anatomy software is evolving towards intelligence, immersion, and multi-functional integration. On the one hand, immersive technologies such as virtual reality (VR), augmented reality (AR), and mixed reality (MR) are being widely integrated to further enhance users' sense of immersion and interactivity; on the other hand, the introduction of artificial intelligence and big data analytics has made personalized teaching, real-time assessment, and optimization of learning paths possible. In addition, the application boundaries of such software are constantly expanding. Beyond educational purposes, they are also being used in scenarios such as clinical pre-operative planning, surgical simulation training, and patient communication, presenting a new trend of integrated development between education and healthcare.

The global 3D Virtual Human Anatomy Software market size was estimated at USD 225.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.80% during the forecast period.
