Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 3D Vision Automotive DMS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 3D Vision Automotive DMS is a driver monitoring solution based on stereo vision and depth perception technology. Using near-infrared stereo camera modules to capture 3D point cloud data of the driver's face, it reconstructs 3D head posture in real-time through convolutional neural networks. The system accurately calculates eyelid closure, gaze direction, and 3D spatial coordinates of the head, effectively overcoming the recognition limitations of 2D vision systems in scenarios such as sudden lighting changes and facial occlusions, providing reliable driver status perception data for L2+ to L3 level autonomous driving systems. The global 3D vision automotive DMS market size is approximately \$1,250 million USD in 2024, with annual installations of about 15.6 million units. The CAGR for the next five years is projected at 18.5%, with a market unit price of approximately \$80 USD per unit, per-line capacity of 0.8-1.2 million units, and industry gross margin generally ranging between 38%-45%.

The global 3D Vision Automotive DMS market size was estimated at USD 1251.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
