## Abstracts

A 3D water cutting machine, also known as a 3D abrasive waterjet cutting system, is an advanced industrial tool that utilizes a high-pressure stream of water mixed with abrasive particles to precisely cut complex three-dimensional shapes from a wide range of materials, including metals, composites, stone, glass, and plastics. Unlike traditional 2D waterjet cutters, these machines incorporate multi-axis robotic arms or gantry systems capable of dynamic movement along the X, Y, and Z axes, as well as rotational adjustments, enabling them to perform intricate bevel cuts, contours, and undercuts without the need for repositioning the workpiece. The technology combines the versatility of waterjet cutting—which allows for cold cutting without heat-affected zones, material distortion, or hazardous fumes—with the dimensional flexibility required for manufacturing components with sophisticated geometries, such as those used in aerospace, automotive, architecture, and artistic applications.

The global 3D Water Cutting Machine market size was estimated at USD 215.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
