Abstracts

3D XPoint (pronounced three dee cross point) is a non-volatile memory (NVM) technology by Intel and Micron Technology; it was announced in July 2015 and is available on the open market under brand names Optane (Intel) and subsequently QuantX (Micron) since April 2017. Bit storage is based on a change of bulk resistance, in conjunction with a stackable cross-gridded data access array. Initial prices are less than dynamic random-access memory (DRAM) but more than flash memory. The 3D Xpoint technology architecture is designed very innovatively. The architecture is designed in way that each memory cell can be addressed individually by fluctuating the voltage supply thus ceasing the need of transistors thereby reducing costs and increases the capacity. Thus the lower costs, increased capacity and better performance would drive the 3D Xpoint technology market.

The global 3D XPoint Technology market size was estimated at USD 4098.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
