Abstracts

3DS authentication is a measure to prevent fraud and can be used as an additional layer of security when making card payments. The name refers to the "three domains" which interact using the protocol: the merchant/acquirer domain, the issuer domain, and the interoperability domain. E-commerce and m-commerce sales around the world are increasing as a result of the surge in smartphone sales and internet penetration. There has been a considerable increase in online fraud as online shopping portals have grown in popularity and online payment methods are more widely accessible.
