Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 3T MRI Scanners competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 3T MRI Scanners are magnetic resonance imaging devices that use high-field strength (3 Tesla) magnets. The core of 3T MRI is to use the strong magnetic field strength of 3T to generate high-resolution medical images. Compared with traditional 1.5T equipment, 3T MRI significantly improves the image signal-to-noise ratio and spatial resolution through a stronger magnetic field and gradient system, and can more clearly display the tiny structures and tissue details inside the human body. It is especially suitable for areas that require high-precision imaging, such as the central nervous system, bones and joints, and soft tissues.

The global 3T MRI Scanners market size was estimated at USD 84.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.20% during the forecast period.
