Abstracts

A 4-axis machining center is a computer numerical control (CNC) machine tool that performs subtractive manufacturing operations?such as milling, drilling, tapping, and boring?on a workpiece using rotary motion along four axes of movement. In addition to the three linear axes (X, Y, and Z), it incorporates a rotary axis (typically the A-axis), which allows the workpiece to be rotated, enabling machining on multiple sides without manual repositioning. This capability increases precision, reduces setup time, and supports the production of more complex geometries?such as camshafts, aerospace components, and intricate molds?compared to 3-axis machines, while remaining more accessible and cost-effective than 5-axis systems for many applications.

The global 4 Axis Machining Center market size was estimated at USD 1825.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
