### Report Overview

4-Iodobutanoic acid is an organic compound with the molecular formula  $C_4H_7IO_2$ , characterized by a four-carbon chain with a carboxylic acid group at one end and an iodine atom at the other. It serves as a versatile intermediate in organic synthesis, particularly in the production of pharmaceuticals, agrochemicals, and specialty chemicals, where its iodine moiety enables further functionalization through cross-coupling reactions or nucleophilic substitutions. The compound's applications extend to peptide modification and materials science, where it acts as a building block for more complex molecules. Market demand is driven by its role in fine chemical manufacturing, though its niche applications and handling requirements, such as stability and reactivity considerations, limit broader industrial use. Growth is influenced by trends in pharmaceutical R&D and the expansion of customized chemical synthesis services.
