Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 4-Nitroaniline competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 4-Nitroaniline is an important organic chemical intermediate widely used in the production of dyes, pesticides, and other chemical products. It is usually prepared by ammonification of nitrobenzene and is a yellow crystalline powder with strong chemical activity. It can be directly used to synthesize various dyes and pigments, and can also be used to synthesize pesticide chloramphenicol; It is also a raw material for anti-aging agents, light stabilizers, and developers. In 2024, global 4-Nitroaniline production reached approximately 120 K MT, with an average global market price of around US\$ 2083 per MT. With the pursuit of green chemistry and sustainable development, especially in the pesticide and dye industries, the production process is increasingly inclined to reduce environmental pollution and improve product efficiency. With the tightening of environmental regulations, this has driven the demand for efficient and low toxicity chemicals, and it is expected that the application of p-nitroaniline in the field of green chemistry will further increase.

The global 4-Nitroaniline market size was estimated at USD 249.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
