## Abstracts

4-Stroke engine oil is a type of lubricant specifically formulated for use in 4-stroke internal combustion engines, which are commonly found in motorcycles, lawnmowers, and small vehicles. In a 4-stroke engine, the oil serves multiple purposes: it lubricates moving parts to reduce friction and wear, cools the engine by dissipating heat, and cleans the engine by carrying away contaminants and deposits. Unlike 2-stroke engines, where the oil is mixed with fuel and burned during operation, 4-stroke engine oil remains separate and is circulated throughout the engine, typically collected in a sump and filtered for reuse. This type of oil is designed to meet specific performance standards, including resistance to thermal breakdown, oxidation, and maintaining viscosity across a range of temperatures. The 4-Stroke Engine Oil market is experiencing steady growth, driven by increasing demand from the automotive, marine, and industrial sectors. With major sales regions including North America, Europe, and Asia-Pacific, particularly China and India, where automotive industries are expanding rapidly. Market opportunities are driven by the growing adoption of motorcycles, lawnmowers, and power generators, along with the shift towards high-performance and synthetic oils. However, challenges include fluctuating raw material prices, environmental regulations, and competition from alternative lubricants. Companies are focusing on product innovation and sustainable practices to capture market share.

The global 4-Stroke Engine Oil market size was estimated at USD 2234.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
