Report Overview

4-Stroke engine oil is a type of lubricant specifically formulated for use in 4-stroke internal combustion engines, which are commonly found in motorcycles, lawnmowers, and small vehicles. In a 4-stroke engine, the oil serves multiple purposes: it lubricates moving parts to reduce friction and wear, cools the engine by dissipating heat, and cleans the engine by carrying away contaminants and deposits. Unlike 2-stroke engines, where the oil is mixed with fuel and burned during operation, 4-stroke engine oil remains separate and is circulated throughout the engine, typically collected in a sump and filtered for reuse. This type of oil is designed to meet specific performance standards, including resistance to thermal breakdown, oxidation, and maintaining viscosity across a range of temperatures.

The global 4-Stroke Engine Oil market size was estimated at USD 2148 million in 2023 and is projected to reach USD 2978.81 million by 2032, exhibiting a CAGR of 3.70% during the forecast period.

North America 4-Stroke Engine Oil market size was estimated at USD 595.77 million in 2023, at a CAGR of 3.17% during the forecast period of 2024 through 2032.
