Abstracts

4-tert-butylcyclohexanol is a cyclic tertiary alcohol characterized by a cyclohexane ring substituted with a hydroxyl group and a bulky tert-butyl group at the para position relative to each other, resulting in a structure that exhibits both hydrophobic properties due to the alkyl substituent and moderate polarity from the alcohol functionality. It exists predominantly in the equatorial conformation for the hydroxyl group to minimize steric strain, which influences its physical properties and reactivity, making it a compound of interest in organic synthesis, fragrance formulation, and as an intermediate in the production of fine chemicals where steric hindrance and specific solubility profiles are desired.

The global 4 Tert Butylcyclohexanol market size was estimated at USD 15.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
