Report Overview

A solenoid valve is an electromechanical device in which the solenoid uses an electric current to generate a magnetic field and thereby operate a mechanism which regulates the opening of fluid flow in a valve.

Solenoid valves are electromechanically operated valves and are used to control the rate of flow in fluid or air powered systems and are quite often just referred to as just 'solenoids'. With automatic operation, solenoid valves are incredibly useful to engineers as they remove the need to manually operate valves. Solenoid valves are most commonly found in fluidics, fluid power pneumatic and hydraulic systems. They are normally constructed from robust materials such as stainless steel, aluminium, brass or plastic.
