## Abstracts

QSFP+ (Quad Small Form-factor Pluggable+) electrical interface module is a high-speed pluggable optical module used in data centers and telecommunications fields, supporting a data transmission rate of 40Gbps. It adopts the design of 4-channel 10Gbps signal parallel transmission, which can meet the needs of high-density high-speed interconnection. It is not only suitable for direct 40Gbps rate connection, but also can be used for applications that achieve higher transmission rates through wavelength division multiplexing (WDM) technology. For example, the QSFP+ LR4 module uses coarse wavelength division multiplexing technology and can support a transmission distance of 10km on single-mode optical fiber. In addition, the QSFP+ optical module also has a digital diagnostic monitoring (DDM) function to facilitate monitoring and management of the working status of the optical module.

The global 40G QSFP+Electrical Port Module market size was estimated at USD 252.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
