Report Overview

4,4'-Biphenol (CAS 92-88-6) is an organic compound consisting of two phenol rings linked by a single bond at the para positions, widely used as a monomer in high-performance polymers, epoxy resins, and liquid crystal materials. Its thermal stability and chemical resistance make it essential in manufacturing polyesters, polycarbonates, and flame-retardant materials, particularly in electronics, automotive, and aerospace applications. The market for 4,4'-Biphenol is driven by increasing demand for advanced polymers in high-temperature and corrosive environments, as well as growth in the electronics sector for liquid crystal displays (LCDs). However, stringent environmental regulations and the availability of substitutes like bisphenol A (BPA) pose challenges. Geographically, Asia-Pacific dominates production and consumption due to robust industrial activity in China, Japan, and South Korea, while North America and Europe focus on high-value applications with stricter compliance standards. Key players prioritize R&D for eco-friendly alternatives and process optimization to align with sustainability trends. Price volatility of raw materials, such as phenol, also impacts market dynamics. Overall, the market is projected to grow steadily, supported by technological advancements and expanding end-use industries.

The global 4,4'-Biphenol (CAS 92-88-6) market size was estimated at USD 225.61 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
