Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 4,4'-Oxydibenzenesulfonyl Hydrazide(OBSH) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 4,4'-Oxydibenzenesulfonyl Hydrazide (OBSH) is a white, odorless powder foaming agent that decomposes within a controlled temperature range to release nitrogen gas, creating fine, uniform, and high-quality cellular structures. OBSH exhibits low toxicity and does not contaminate end products, making it one of the most efficient sulfonyl hydrazide-based foaming agents. Its decomposition temperature can be further adjusted by adding PD, CD, or zinc salts. The product is widely used in natural and synthetic rubbers, rubber-resin blends, and wire and cable manufacturing, producing odorless, non-polluting, and non-discoloring foamed products. Due to its broad applicability and compatibility with other foaming agents, OBSH is often referred to as a "universal foaming agent" and, in some cases, can even function as a crosslinking agent during curing processes. The upstream raw materials mainly include 4,4'-oxydiphenyl, sulfonyl chloride, and hydrazine-based intermediates, supplied by major global fine chemical manufacturers. Downstream customers include rubber product manufacturers, wire and cable producers, and high-performance composite material manufacturers. In 2024, the global production capacity of OBSH is estimated at approximately 20,000 tons, with market sales around 16,850 tons and an average price of about USD 6,483 per ton. Industry gross margins typically range between 22% and 30%, influenced by upstream raw material costs, production yields, and customization requirements. With growing demand for high-performance rubber products and environmentally friendly materials, the OBSH market continues to expand steadily, with products trending toward higher purity, lower impurities, and adjustable decomposition temperatures. Currently, the 4,4'-Oxydibenzenesulfonyl Hydrazide(OBSH) market is

experiencing steady growth, with a relatively high degree of concentration and production capabilities dominated by major global fine chemical manufacturers. Demand is primarily driven by natural and synthetic rubber, wire and cable manufacturing, and rubber-resin composite industries, with a strong focus on high-performance and environmentally friendly foamed products. Upstream raw material price fluctuations, complex production processes, and strict purity requirements directly affect supply chain stability and gross margins, while R&D capabilities and formulation optimization have become key competitive advantages. Looking ahead, the 4,4'-Oxydibenzenesulfonyl Hydrazide(OBSH) market is expected to evolve toward higher purity, lower impurities, adjustable decomposition temperatures, and multifunctionality to meet the growing demand for high-performance rubber and eco-friendly materials. Technological innovation, smart manufacturing, and green processing will further enhance product performance and production efficiency. Additionally, multifunctionality and compatibility with other foaming agents will expand its applications in emerging sectors, such as environmentally friendly construction materials, high-end automotive rubber, and advanced composite products. However, the market also faces several challenges. Raw material cost volatility, complex process control, and increasing customization demands can put pressure on profitability. Meanwhile, alternative foaming agents and emerging crosslinking technologies pose potential substitution risks to traditional OBSH applications. Environmental regulations and green manufacturing trends further require producers to optimize energy consumption, emissions, and waste management continuously to maintain competitiveness. Overall, the sustainable growth of the OBSH market will depend on continuous technological innovation, effective supply chain management, and strong collaboration with downstream customers.

The global 4,4'-Oxydibenzenesulfonyl Hydrazide(OBSH) market size was estimated at USD 109.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
