Abstracts

The 48V Mild Hybrid System is a vehicle power system that combines traditional vehicle power systems with advanced hybrid technology. This system uses 48V voltage and adds some necessary components, such as 48V motors, batteries, etc., to achieve more efficient and environmentally friendly vehicle power output. This hybrid system is different from the traditional full hybrid system. Strong hybrid systems typically require higher voltages, and hybrid technologies from companies like Toyota fall into this category. The 48V light-hybrid system is relatively simple, and its motor power and battery capacity are both small. Therefore, although its energy saving and emission reduction effect is not as good as that of the strong hybrid system, it is lower in cost and more suitable for upgrading traditional gasoline vehicles. The application range of 48V light hybrid systems is also expanding. Initially, the 48V mild hybrid system was mainly used in high-end cars, but with the continuous development of technology and the reduction of costs, it has also begun to be used in mid-range cars. In addition, 48V light hybrid systems are also used in trucks, buses, construction machinery and other fields. At the same time, with the increasing global focus on energy conservation and emission reduction, and the implementation of increasingly stringent environmental regulations, 48V light hybrid systems will have greater market space. Because the 48V mild hybrid system can not only improve the fuel economy of the car, but also reduce emissions and comply with environmental protection requirements.

The global 48V Mild Hybrid System market size was estimated at USD 6121.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.90% during the forecast period.
