In telecommunications, a base station is a fixed transceiver that is the main communication point for one or more wireless mobile client devices.A base station serves as a central connection point for a wireless device to communicate. It further connects the device to other networks or devices, usually through dedicated high bandwidth wire or fiber optic connections. Base stations are generally a transceiver, capable of sending and receiving wireless signals; otherwise, if they only transmitted signals out, they would be considered a transmitter or broadcast point. A base station will have one or more radio frequency (RF) antennas to transmit and receive RF signals to other devices.Base stations are also central points that all clients connect to in a hub and spoke style network; it would not be a client among similar peers. Generally, if client devices wanted to communicate to each other, they would communicate both directly with the base station and do so by routing all traffic through it for transmission to another device.5G is the 5th generation mobile network. It is a new global wireless standard after 1G, 2G, 3G, and 4G networks. 5G enables a new kind of network that is designed to connect virtually everyone and everything together including machines, objects, and devices. 5G wireless technology is meant to deliver higher multi-Gbps peak data speeds, ultra low latency, more reliability, massive network capacity, increased availability, and a more uniform user experience to more users. Higher performance and improved efficiency empower new user experiences and connects new industries. The 5G base station is the core device of the 5G network. The architecture and configuration of the base station directly affect the deployment strategy of the 5G network. 5G base-station architecture includes various equipment, such as a 5G base station power amplifier, which converts signals from RF antennas to BUU cabinets (baseband unit in wireless stations).The core manufacturers in global 5G Base Station market are Huawei, Ericsson, ZTE, Nokia and Samsung, etc, accounting for 92% market share. Huawei is the world's largest 5G Base Station manufacturer, occupying approximately

38% of the market share. From the perspective of product type, 5G Macro Base Station accounted for a share of 97% in the global 5G Base Station market. In terms of application, C-Band holds the largest share, accounting for 80% share.
