The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 4G OBD Vehicle Terminal competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of 4G OBD vehicle terminals will reach 9.27 million units, with an average selling price of US\$60 per unit. The 4G OBD vehicle terminal is an intelligent vehicle device based on 4G communication technology. It connects to the vehicle through the OBD-II interface to achieve remote monitoring, data collection, fault diagnosis, GPS positioning and driving behavior analysis. The terminal can read vehicle data in real time, such as vehicle speed, fuel consumption, engine status and fault codes, and transmit the information to the cloud through the 4G network, providing accurate data support for fleet management, insurance companies and individual users. It can not only help optimize driving behavior and improve fuel economy, but also be used for auto insurance UBI (usage-based insurance), anti-theft tracking and remote control, such as oil and power cut-off functions. Compared with traditional OBD devices, the 4G OBD vehicle terminal has faster data transmission speed and wider coverage. It can more efficiently support intelligent connected vehicles (IoV) and Internet of Vehicles services, and has wide application value in the fields of vehicle management and safety protection. The 4G OBD vehicle terminal market is in a rapid development stage, mainly driven by the popularization of intelligent connected vehicles and vehicle networking technologies. These terminals, connected to a vehicle's OBD port, enable real-time vehicle positioning, driving data collection, driver behavior monitoring, remote diagnostics, and vehicle management. They are widely used in logistics, government vehicles, taxis, ride-hailing services, and private vehicles. With continuous technological advancements, 4G OBD terminals are continuously improving in data transmission speed, stability, and intelligence. Meanwhile, they are gradually evolving towards 5G

upgrades and platform-based services, further expanding their applications in fleet management, insurance, vehicle maintenance, and smart transportation development, thereby driving the continued expansion and value growth of the entire market.

The global 4G OBD Vehicle Terminal market size was estimated at USD 556.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.80% during the forecast period.
