Report Overview

A set-top box (STB) is an information appliance device that generally contains a TV-tuner input and displays output to a television set and an external source of signal, turning the source signal into content in a form that then be displayed on the television screen or other display device. They are used in cable television, satellite television, and over-the-air television systems, as well as other uses.

Asia Pacific 4K STB market is expected to witness a CAGR of over 50% from 2016 to 2024. The high growth prospects in this region can be primarily attributed to increased penetration of 4K TVs in the higher economic class and government mandates pertaining to digitization in the region. Diminishing prices of Ultra HD televisions and compatible STB devices as a direct consequence of escalation in local production have led to market growth in the region.

Prominent Indian digital broadcast satellite providers such as Videocon and Tata Sky have started introducing 4K STBs in a bid to offer enhanced TV viewing experience to their consumers for gaining the first mover advantage in the industry with an estimated half a billion TV viewers collectively.

North America is expected to observe a surge in IPTV devices' demand on account of the presence of high-speed network infrastructure, coupled with add-ons and features offered to users.
