Abstracts

4th Axis CNC (Computer Numerical Control) Rotary Table is an essential accessory for CNC machines that adds an additional degree of freedom to the machining process. It typically consists of a rotating platform that is mounted on a base and controlled by a computerized system. The fourth axis, which is the rotational axis, allows the workpiece to be rotated around a central axis, usually perpendicular to the three linear axes (X, Y, and Z) of the CNC machine. This rotation enables the machining of complex geometries, such as circular profiles, helical grooves, and parts with features that require multiple angular positions. Controlled by precise CNC programming, the 4th Axis Rotary Table can accurately position the workpiece at specific angles, ensuring high precision and repeatability in operations like milling, drilling, and turning. It is widely used in various industries, including aerospace, automotive, and mold making, where the production of intricate and high-quality parts is crucial, enhancing the versatility and productivity of CNC machining systems.

The global 4th Axis CNC Rotary Table market size was estimated at USD 1093.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
