Abstracts

5005 aluminum sheet belongs to the 5-series Al-Mg alloy, but its magnesium content is lower than that of other 5-series aluminum sheets, giving it slightly better corrosion resistance than 3-series alloys. Among them, 5005 aluminum alloy has similar properties to 3003 aluminum alloy, featuring moderate strength, good weldability, excellent machinability, and formability. However, its anodic oxidation effect is superior to that of 3003 aluminum alloy, resulting in a brighter oxide film that can achieve the same color as 6063 alloys. Therefore, this aluminum sheet is widely used in high-end wide-format curtain wall panels, architectural decorations, vehicle interior materials, instrument panels, anodizing applications, cookware, conductors, and more.

The global 5005 Aluminum Sheet market size was estimated at USD 2115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
