### Report Overview

55%Al-Zn galvanized steel is a specialized coating material where the metallic coating consists of 55% aluminum, 43.4% zinc, and 1.6% silicon by weight, offering superior corrosion resistance compared to traditional galvanized steel. This alloy coating combines the durability of aluminum, which forms a protective oxide layer, with the sacrificial corrosion protection of zinc, making it highly effective in harsh environments such as coastal areas, industrial zones, and high-humidity regions. The silicon content enhances coating adhesion and uniformity during the hot-dip process. Commonly used in roofing, siding, automotive components, and HVAC systems, 55%Al-Zn galvanized steel provides long-term performance with minimal maintenance, often outlasting standard galvanized coatings by two to four times. Its heat reflectivity also improves energy efficiency in building applications. The product is manufactured through continuous hot-dip galvanizing, ensuring consistent quality and thickness, and is available in various grades and finishes tailored to specific industrial requirements. The growing demand for durable, cost-effective corrosion-resistant materials in construction and manufacturing drives its adoption, particularly in regions with aggressive environmental conditions.

The global 55%Al Zn Galvanized market size was estimated at USD 3003.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
