Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 5A Molecular Sieve Activated Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global market price for activated 5A molecular sieve powder will be US\$5,175 per ton, with sales of approximately 416,000 tons. Activated 5A molecular sieve powder is produced by high-temperature calcination of raw 5A molecular sieve powder. Because most of the moisture is lost during calcination, activated 5A molecular sieve powder exhibits strong adsorption capacity, excellent dispersibility, and rapid adsorption. It is widely used in industrial production as a selective adsorbent, effectively removing trace moisture and gaseous impurities from materials, preventing bubbles and other quality issues. In some applications, particularly polymer production and gas purification, activated 5A molecular sieve powder can improve product quality without altering the physical and chemical properties of the product. Upstream suppliers include chemical raw material and equipment suppliers, including sodium silicate, aluminum hydroxide (basic raw materials), clay (binder), and calcination kiln manufacturers. Typical downstream customers include PetroChina, BASF (petrochemical n-alkane separation), Midea, Daikin (refrigerant drying), Air Products (industrial gas purification), as well as coatings and pharmaceutical companies. Sales are through chemical distributors.

The global 5A Molecular Sieve Activated Powder market size was estimated at USD 2155.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
