The 5G Active Antenna Unit (AAU) is a critical component in modern 5G radio access networks, integrating active electronics such as power amplifiers, low-noise amplifiers, transceivers, and beamforming capabilities directly with the antenna elements to enable advanced Massive MIMO (Multiple Input Multiple Output) functionality. Unlike passive antennas, AAUs perform signal processing at the radio unit level, allowing for dynamic beam steering, spatial multiplexing, and improved spectral efficiency, which are essential for meeting 5G requirements such as enhanced mobile broadband, ultra-reliable low-latency communication, and massive machine-type communications. This integration reduces feeder losses, simplifies site deployment, and supports higher frequency bands like mid-band and millimeter-wave spectrum, making AAUs a foundational technology for deploying dense, high-capacity 5G networks.

The global 5G Active Antenna Unit market size was estimated at USD 3850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
