Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 5G Front End Modules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The 5G front end module is the core RF component in 5G communication equipment (such as smartphones, base stations, and IoT terminals). It is responsible for signal transmission (Tx), reception (Rx), filtering, amplification, and switching, and directly affects communication quality, power consumption, and coverage. 5G uses Sub-6GHz and millimeter wave (mmWave) frequency bands. Front-end modules need to support higher frequencies and wider bandwidths, and promote the development of multi-band integration technologies (such as carrier aggregation). 5G base stations and terminals require more antenna channels, and front-end modules need to integrate more power amplifiers (PA), low noise amplifiers (LNA) and switches to improve signal processing capabilities. 5G mobile phones need to be compatible with multi-mode and multi-frequency such as 4G/3G/2G, and front-end modules need to be more integrated (such as AiP antenna packaging and SoC integration) to save space. 5G high data rates lead to increased power consumption, driving low-power design (such as GaN/SOI materials) and efficient heat dissipation technology. Applications such as AR/VR, Internet of Things (IoT), and Vehicle-to-everything (V2X) require miniaturization, low latency, and high reliability of front-end modules. 5G private networks require customized front-end modules to adapt to scenarios such as factory automation and remote control. Some 5G terminals (such as Huawei Mate 60) support satellite communications, driving multi-mode fusion of front-end modules.

The global 5G Front End Modules market size was estimated at USD 3168.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70%

during the forecast period.
