Report Overview

The AoC antenna directly integrates the radiating components into the back end of the RF chip stack. The advantage is that on a single module with an area of only a few square millimeters, there is no RF interconnection and integration of RF and baseband functions. Considering cost and performance, AoC technology is more suitable for the higher frequency terahertz frequency band (300GHz-3000GHz) than the millimeter wave frequency band, while AiP is based on packaging materials and processes, integrating antennas and chips in the package to achieve system-level wireless Functional technology. AiP technology conforms to the trend of increasing integration of silicon-based semiconductor processes, taking into account antenna performance, cost and volume, and represents the major achievements of antenna technology in recent years and the direction of technological upgrading of terminal antennas in the 5G millimeter wave frequency band.
