Abstracts

5G Non-Terrestrial Networks (NTN) refer to the use of satellite or high-altitude platforms, such as drones or balloons, to provide 5G wireless connectivity to users. These networks are being developed to address the challenges of providing connectivity in remote or hard-to-reach areas where traditional terrestrial networks are not practical. 5G NTN is expected to provide a wide range of benefits, including improved coverage and capacity, reduced latency, and increased reliability. It is also expected to support a wide range of applications, including internet of things (IoT) devices, autonomous vehicles, and remote healthcare services. 5G is a key and cross-age technology that opens the era of the Internet of Everything, and all countries are grabbing market share. The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly. China is a leader in 5G technology. According to the latest statistics from the Ministry of Industry and Information Technology, China newly added 887,000 5G base stations in 2022 (currently reaching 2.312 million, accounting for more than 60% of the world's total), and 110 cities in China have reached gigabit city construction standard. According to the Digital China Development Report (2022) released by the State Internet Information Office, by the end of 2022, China had built a total of 2.312 million 5G base stations, with 561 million 5G users, accounting for more than 60% of the world.

The global 5G Non-Terrestrial Networks market size was estimated at USD 5425.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.00% during the forecast period.
