Abstracts

The 5G Radio Remote Unit (RRU) is a critical component of modern wireless infrastructure, serving as an active antenna unit that processes and transmits radio frequency signals between the core network and user equipment. It is typically mounted near antennas on towers or rooftops to minimize signal loss, performing key functions such as digital-to-analog conversion, amplification, filtering, and beamforming to enable high-speed, low-latency 5G communication. Unlike centralized baseband units, RRUs are deployed distally in a distributed architecture, supporting advanced features like massive MIMO and carrier aggregation, which are essential for meeting the increased capacity, coverage, and energy efficiency demands of 5G networks.

The global 5G Radio Remote Unit (Rru) market size was estimated at USD 1850.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
