Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 5G Reduced Capability (RedCap) T-Box competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 5G Reduced Capability (RedCap) T-Box is an in-vehicle terminal device based on 5G RedCap technology. By cutting traditional 5G functions (such as bandwidth, number of antennas, modulation order, etc.), it can achieve a 30%-50% cost reduction, a 20%-40% power consumption reduction, and meet the needs of the Internet of Vehicles for high-speed data transmission and real-time response while maintaining the core advantages of 5G (low latency, high reliability). It is designed for applications that do not require all the functions and complexity of standard 5G. For devices such as the Internet of Things (IoT), especially in the automotive industry, it is a more cost-effective and energy-efficient solution for implementing Internet of Vehicles functions. RedCap was launched in 3GPP Release 17 and is designed for IoT applications with lower bandwidth and latency requirements than mature 5G, making it ideal for automotive telematics. This enables vehicles to achieve more cost-effective and energy-efficient 5G connections while still providing sufficient performance for applications such as remote diagnostics, software updates, and multimedia streaming. As a Reduced Capability 5G technology defined in the 3GPP R17 protocol standard, RedCap is targeted at industrial manufacturing, power, home broadband, connected cars, and smart wearables, achieving cost-performance advantages. According to estimates, RedCap can reduce 80% of the cost of 5G eMBB modules (the price can drop to \$10), terminal power consumption can be reduced by 20% compared with 4G, and network capacity can be increased by more than 10 times compared with 4G. At the same time, it inherits 5G key capabilities such as uRLLC, network slicing, edge computing, and 5G LAN, and can meet the diverse network requirements of

industry application scenarios. It is particularly worth mentioning that RedCap can be introduced based on the smooth upgrade of the existing 5G network, without the need for major modifications to the existing network.

The global 5G Reduced Capability (RedCap) T-Box market size was estimated at USD 574.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.70% during the forecast period.
