Report Overview

Automated Guided Vehicle (AGV) is a portable robot that has been used extensively to simplify intralogistics and material handling processes in industrial environments without an onboard operator or driver. The first known AGV was introduced by Barret Electronics of Northbrook in 1953. At the time it was simply a tow truck that followed a wire in the floor instead of a rail. Since then, new technologies renew AGV to enhance its performance and capability over and over again. However, due to the shortcomings of connectivity solutions like Wi-Fi, requirements on latency and reliability of communication link cannot satisfy the need of AGV which limits the performance and capability of AGV. But it changed in the era of 5G. Armed with 5G, AGV unlocks its potential.

This report provides a deep insight into the global 5G-RGV market covering all its essential aspects.
