Report Overview

Small-cell base stations, known as transceivers, use low power and are implemented in densely populated areas and are cheaper and much faster to deploy than the larger macrocells. As 5G transmitter range is so limited, multiple small-cell antennas are needed to provide the services that 5G promises. Small cells transmit signals using advanced techniques MIMO, beamforming and mmWaves. Using the small-cell model, low-power transmitting stations can easily be deployed. They can be mounted on walls for indoor applications, or on lamp posts outdoors.
