Report Overview:

5G will further enrich the data provided to emergency services field operatives through more high definition video and imaging, with data speeds of over 100Mbps and up to 10Gbps. This would also enable augmented reality, helping paramedics administer aid or use equipment, letting drivers find the most efficient route based on real-time traffic and showing fire crews the way through smoke-filled buildings. 5G will allow real-time remote control of devices, such as drones, as it has very low latency of less than 10ms. Drones could be first on the scene, monitoring the situation as support vehicles navigate traffic. They could easily get a birds-eye view of building fires before sending rescue workers in. And they could carry essential medicine to the scene of an accident that's causing traffic jams.

The Global 5G Technology in Emergency Services Market Size was estimated at USD 124.15 million in 2023 and is projected to reach USD 903.19 million by 2029, exhibiting a CAGR of 39.20% during the forecast period.
